HITACHI

Inspire the Next

Engine Management Systems

Not Just O.E. Fit.. It Is The O.E. Part!

Ignition Coil

- » Design flexibility allows for a wide range of applications
- » Efficient spark energy delivery
- » Gold plated connectors extend product life

Mass Air Flow Sensor

- » Measures air flow accurately
- » Meets emissions standards
- » Quality components provide enhanced durability

Electronic Throttle Body

- » Precise airflow control
- » Dependable performance
- » Accurate engine control

Fuel Pumps and Injector

- » Disperse fuel accurately to meet optimal horsepower requirements
- » Designed to last vehicle life span

HITACHI—O.E. INSTALLED!

Oil and Water Pumps

- » Reduces friction and keeps your engine running cool
- » Designed to last vehicle life span

Ignition Coils

PrencO's precision manufactured Ignition Coils are constructed of premium components and are designed to exactly match OE coil specifications.

PrencO offers a complete range of Ignition Coils covering thousands of import and domestic applications from 1960 through to today.

PrencO Ignition Coils are rigorously tested in house to meet or exceed SAE J973, ISO 19813, and/or ISO 13476 requirements.

Not Just O.E. Fit.. It's O.E. Installed!

Cam/Crankshaft Position Sensors

Crank and Cam Shaft Position Sensors play a vital role in the performance of the modern day engine. Malfunctioning sensors will cause a range of issues from misfires, to RPM fluctuations, to No Start conditions.

PrencO sensors are rigorously tested in the lab and on the street to ensure optimal performance. All PrencO sensors meet or exceed OE sensors in terms of function, durability, and reliability.

Ignition Wire Sets

Constant high voltage, heat, oil, grease, and ozone exposure will eventually deteriorate Ignition Wire components and cause them to fail.

PrencO ignition wire sets are constructed in our Canadian facility using only premium quality components and ignition wire. All wire sets are designed and constructed to match OE fitment and performance.

PrencO ignition wire sets are an exact match to OE design specifications and include lead markings, wire loom, and other accessories where applicable. Complete import/domestic coverage, OE quality, OE performance, and OE reliability.
