EVAPORATIVE EMISSIONS SYSTEMS:

LEAK, FLOW & FUNCTION TESTING

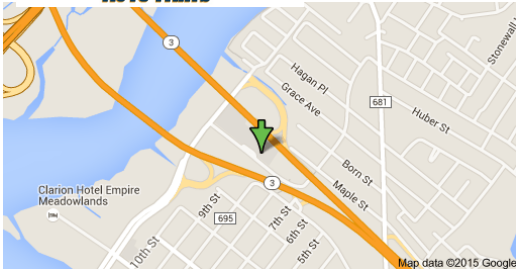

OEM flowcharts routinely make EVAP system diagnostics too complicated. Despite the wide variety of systems out there, our research has revealed that a layered approach is much faster than the linear OEM approach, leading to a profitable diagnosis without the wasted (and unbillable) diagnostic time or multiple trips for your customer. This is the 2nd subject in our Import Series, but also comes with a thick Domestic section. First, we show you universal techniques applicable to every system. If no leaks are found, the procedures become more system-specific, but not yet manufacturer-specific. All systems fall into one of four categories listed below, and by following our universal procedures, you can still avoid the technical nonsense that typically lengthens diagnostic times! Most faults are found using these first two layers. We have also included manufacturer and system specific tips and tricks for those cases where you'll need to go that deep. System coverage includes:

- Traditional & Split Purge/Seal Systems
- Leak Detection Pumps (KOER & Key-OFF)
- Natural Vacuum (EONV, NVLD, ESIM)
- DMTL (comparative current flow)

At the manufacturer and system-specific layer, Scan Tool PIDs and controls are inconsistent. While we cover them all for you, we also discuss the back-up plans that may involve a power probe, jumper wires, a gas analyzer, Mode \$06, or other simple tools and methods to get your EVAP system to give up its secrets. From a simple high-level pass to system-specific tips, this seminar covers the entire diagnostic process. We have included dozens of realworld examples to prove that these strategies work quickly on the vehicle's first trip into your shop. We are confident that this seminar will enable you to be a lot more successful in finding leak or flow codes and in verifying proper component functionality. Sign Up Today!

Our Seminar Schedule..

For The Next 3 Months More Than Parts!

Training for Your Staff..So You Make More!

(all seminars are held at La Reggia at the Meadowlands Plaza Hotel, Secaucus and
Costas Italian Restaurant, Roselle Pk, NJ)

All Seminars Presented by ATG, MEA, AC Delco and Motorcraft...

Wednesday, September 21 and Thursday September 22

Evaporative Emissions Systems..

Leak, Flow and Testing

A Unique approach To EVAP Training

Wednesday, October 19

Shop Management Like You Have Never Seen Before

Owner Liabilities, Legal Points of View, Insurance Pitfalls and P&L Survival
Current Day Shop Concerns and How To Avoid Troubles

Wednesday, November 16 and Thursday, November 17

Hands On Training
